Technical characteristics

Recycled leather/Synderme Leather

This type of leather is made from **offcuts and leather waste** (from Western Europe only) ground to make a paste. After the paste is spread and dried at the tannery, synderme (leather board) is obtained. **It is strong and has the same look as non-reconstituted leather.**

Composition of Synderme (recycled leather)

- 70 % animal origin: leather fibres (ground offcuts)
- 20 % vegetable origin: latex or rubber (natural product from the rubber tree)
- 10 % resin, binder, softening grease, pigments.

Environmentally-friendly manufacturing: natural products, vegetable tanning without chrome or aluminium, 100% recyclable and re-usable. The leather collection explores the potential of this ancient, natural and renewable material.

The different models, objects and furniture, almost all foldable to save on packaging and transport, are assembled using traditional methods: lacing, clips or buttons. The colours in stock are: cognac, black and chocolate. Depending on quantity, customisation by hot stamping, printing, different colours of leather and stitching. The packaging consists of nine sizes of cotton bag with a customised leather label.

Saddle stitching

Buffalo Crust Leather
Vegetable tanning
100% natural & 100% recyclable

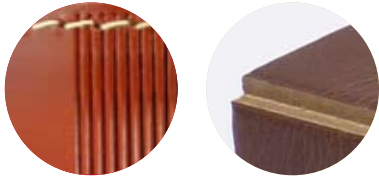

Neutral hot stamping and in colour

Lambskin Leather
Vegetable tanning
100% natural & 100% recyclable

Scoring
